Third-Party Risk Management (TPRM) Register Framework

Zero-Middleware Audit Schema for African Industrial Enterprise Portals

Document Control Reference: `NSK-TPRM-REG-2026-V1`
Classification: Restricted / Internal & Enterprise Audit
Target Event: FNB App of the Year Hackathon 2026 // Google for Startups Immersion EMEA
Author: Maria Thembi Mathibela, Founder & CEO
Entity: Nyoni Sakha Kumbi (Pty) Ltd t/a NSK Devpreneur Hub

1. Master Register Matrix Structure

To ensure absolute audit readiness for enterprise mining houses (Anglo American, Glencore) and commercial banks (FNB), NSK Devpreneur Hub utilizes a centralized, repeatable process workbook tracking software versioning, library dependencies, and vendor risk profiles:

Component ID	Dependency / Module	Functional Layer	Criticality	Data Exposure Risk	Security Control & Status	Last Review
NSK-DEP-001	Native Python Runtime	Backend Core	High	None (Local Execution)	Locked to Stable LTS release	12 Oct 2026
NSK-DEP-002	Node.js Microservices	Data Ingestion Rail	High	None (On-Premise Node)	Dependency tree audited; no external links	12 Oct 2026
NSK-SYS-001	The Forge Engine	Process Automation	Critical	Metadata Only	Hardened local access controls via kernel	12 Oct 2026
NSK-SYS-002	The Foundry Compiler	Schema Compilation	Critical	Restricted PII	Cryptographic hash matching; local storage only	12 Oct 2026
NSK-SYS-003	LaunchSense Utility	Industrial Edge Node	High	Network Config	Isolated within client firewall; 0 outbound	12 Oct 2026

2. Risk Evaluation & Repeatable Governance Process

- **Assessment History & Evidence Tracking:** Every component, microservice, or local dependency maintains a documented assessment history backed by system cryptographic logs to satisfy industrial compliance auditors and banking regulators.
- **Vulnerability Remediation Protocol:** In alignment with international cybersecurity baseline practices, any identified code or package vulnerability undergoes immediate on-premise patching, ensuring our middleware-free architecture remains entirely self-sustaining.
- **Sprint Review Schedule:** The register is updated iteratively every sprint cycle to guarantee all security data remains completely current as our platform scaling framework matures.

> **FNB PayShap Integration Clearance:** Component verification clears batch status for automated commercial disbursement via First National Bank PayShap APIs.
