POPIA Data Sovereignty Statement

Compliance Framework under South Africa Protection of Personal Information Act

Document Control Reference: `NSK-POPIA-DSS-2026-V1`
Classification: Legal & Regulatory Compliance Specification
Effective Date: 12 October 2026
Entity: Nyoni Sakha Kumbi (Pty) Ltd t/a NSK Devpreneur Hub
Founder & CEO: Maria Thembi Mathibela

1. Scope and Objective

This statement defines the data sovereignty architecture of the NSK Devpreneur Hub. It outlines our compliance with the **Protection of Personal Information Act (POPIA), Act No. 4 of 2013**, within the context of serving enterprise corporate clients, mining conglomerates (such as Anglo American and Glencore), tier-1 banks (FNB), and public sector agencies in South Africa.

2. The Core Rule of Three (SMME POPIA Compliance)

NSK Devpreneur Hub strictly enforces the three foundational principles of POPIA required for sustainable enterprise ecosystem integration:

- **Principle A (Consent & Transparency):** We explicitly notify suppliers and enterprise clients of the exact nature of the compliance metadata processed, obtaining mandatory, documented agreement prior to any data extraction or aggregation.
- **Principle B (Purpose Specification):** Customer and vendor records are processed solely for the explicitly defined purpose of procurement vetting, spatial zoning clearance, and commercial payment authorization.
- **Principle C (Information Security & Non-Disclosure):** We maintain immutable, zero-cloud dependency security protocols. Personal and financial identifiable data is structurally secured and will never be shared, published, or transferred without verified, explicit third-party consent.

3. Zero-Middleware & Localized Sovereignty Architecture

Unlike traditional cloud software that exposes corporate data to transnational jurisdictions and volatile foreign exchange variables, the NSK platform leverages a decoupled Python and Node.js backend pipeline engineered exclusively for on-premise execution:

- **Local Processing Rail:** Data ingested through The Forge and compiled by The Foundry executes entirely on local, on-premise edge hardware (such as our dedicated ARM-based micro-server clusters).
- **Geographical Data Residency:** All data remains physically within the host enterprise's perimeter (e.g., local mine sites or municipal data centers). Data is never backhauled to external foreign servers, entirely removing cross-border information transfer risks.

4. Certified Accountability Seal

As a solo founder, systems engineer, and cybersecurity practitioner, I personally verify and sign off on our data sovereignty protocols:

Certified Corporate Sign-Off:

- **Officer:** Maria Thembi Mathibela, Founder & CEO
- **Entity:** Nyoni Sakha Kumbi (Pty) Ltd (Reg: 2023/123456/07)
- **Jurisdiction:** Republic of South Africa • eMalahleni, Mpumalanga
- **Regulatory Status:** Fully Certified • POPIA Act 4 of 2013 Compliant
