NSK Devpreneur Hub

Sovereign Digital Public Infrastructure (DPI) & 14ms TPRM Security Engine

FNB App of the Year Hackathon 2026 // Best Hackathon Solution

Track: Youth Entrepreneurship & Small-Business Growth // Sector: Cybersecurity

Founder & Systems Architect: Maria Thembi Mathibela

Entity: Nyoni Sakha Kumbi (Pty) Ltd | eMalahleni, Mpumalanga

🌐 **Live App:** `https://devpreneur-hub.vercel.app/tprm-audit`

1. The Problem, Who Is Struggling & Why It Matters

70%+ of Township & Host-Community SMMEs Are Locked Out by Bureaucracy

👤 Who Is Struggling? (Primary Users)

1. **Township & Host-Community Suppliers** (e.g., *Sindi's Engineering* in the eMalahleni/Middelburg mining corridor) who lose tenders and face severe cash-flow starvation waiting 21+ days for compliance clearance.

2. **Corporate ESD, Mining & Municipal Procurement Teams** drowning in fragmented PDFs, manual CIPC/spatial audits, and millions wasted on foreign cloud middleware.

📊 South African Market Statistics

- **98.5% of SA businesses** are SMMEs, generating **34% of GDP** (FinScope / IFC).
- **Over 70% of township SMMEs fail** within 2–3 years—with **delayed invoice & onboarding verification (21–30 days)** cited as the #1 cash-flow killer.
- **R100B+ in Enterprise & Supplier Development (ESD)** and mining Social & Labour Plan (SLP) spend is bottlenecked by manual Third-Party Risk Management (TPRM).

Why It Matters: Banks like FNB cannot safely trigger instant commercial disbursements or supplier financing when third-party risk verification takes 3 weeks and leaks South African PII to offshore clouds.

2. The Solution & How It Works

NSK Sovereign DPI Utility Rail: From 3 Weeks to 14 Milliseconds

We engineered an **on-premise, zero-middleware Digital Public Infrastructure (DPI) utility rail** that automates spatial corridor verification, legal/CIPC compliance, and deterministic TPRM risk auditing straight at the hardware & API layer.

- **Stage 01 — The Foundry (Spatial GIS Bounds):** Uses **Google Maps Geospatial APIs** & municipal zoning matrices (SPLUMA/REDZ) to verify a supplier's physical coordinates and mining-corridor commute in real time.
- **Stage 02 — The Forge (Legal & CIPC Automation):** Validates CIPC structural registration and compiles BCEA/tax compliance schemas without human intervention.
- **Stage 03 — 14ms TPRM Security Engine:** Executes deterministic SHA-256 hash verification on **4-Core ARM64 micro-nodes (Rockchip RK3588 drawing <15W)** with **0 outbound internet calls**.
- **Stage 04 — FNB Commercial Settlement Hook:** Emits a cryptographic clearance seal (`CLEARED_PAYSHAP_BATCH`) to trigger instant FNB PayShap commercial disbursement.

3. User Journey Story: Sindi's Engineering (eMalahleni)

Compressing a 21-Day Manual Nightmare into a 14ms Unbroken Pipeline

```
[ BEFORE NSK: 21-Day Manual Supply-Chain Lockout ]
Sindi submits PDFs → 5 Disconnected Portals → 3-Week Manual Vetting → Delayed Payout → Cash-Flow Crisis

[ WITH NSK CONTINUOUS TRIAD: One Input. One Action. Instant Visible Result. ]
1. INPUT: Sindi enters her CIPC Entity ID & eMalahleni Workshop GPS Coordinates into NSK Hub.
2. ACTION: Procurement Officer clicks "Run Live Batch Simulation" & "Spatial Commute Matrix".
3. VISIBLE RESULT (14ms/rec):
   ├─ Foundry verifies 18km route to Anglo/Glencore Witbank Complex via Google Maps Matrix (0.2s)
   ├─ TPRM Engine matches SHA-256 compliance hash on local ARM64 cache with 0 external calls (14ms)
   └─ FNB PayShap Commercial Hook clears instant invoice disbursement straight to Sindi's account!
```

Human + Technical Impact: Sindi gets paid on Day 1 instead of Day 30. The mining house proves 100% DMRE Social & Labour Plan (SLP) compliance. FNB captures the commercial settlement volume.

4. Live Product Interface & Visual Walkthrough

Production UI Live at `devpreneur-hub.vercel.app/tprm-audit` & `/enterprise`

UI Screen 1: /tprm-audit (14ms TPRM Console)

```
[ADJUDICATION INTERACTIVE HARNESS]
▶ Button: [ ⚡ Run Live Batch Simulation (1,000 Records) ]

[14:22:01.084] [NSK-FOUNDRY] Initializing local schema pipeline...
[14:22:01.092] [NSK-HW-AUDIT] Target: 4-Core ARM64 RK3588 (10W TDP)
[14:22:01.121] [NSK-SPATIAL] eMalahleni/Middelburg Corridor: VERIFIED
[14:22:01.145] [NSK-TRACE] Match: CIPC-ZA-9482019481 [Zero Middleware]
[14:22:01.203] [NSK-SECURITY] Outbound calls = 0 | Inbound alerts = 0
[14:22:01.204] [NSK-FORGE] Compiled: 14ms/rec (88.7% Latency Drop)
[14:22:01.210] [FNB-HOOK] CLEARED: Instant PayShap Disbursement
SHA-256 Seal: 9f86d081884c7d659a2feaa0c55ad015a3bf4f1b...
```

UI Screen 2: /enterprise (Spatial Commute Matrix)

GOOGLE MAPS PLATFORM // LIVE SPATIAL CORRIDOR

▶ Button: [🗺️ **Spatial Commute Matrix Modal**]

- **Origin Hub:** eMalahleni Industrial Corridor (-25.8728, 29.2553)
- **Verified Destinations:**

├─ 🚗 **Middelburg Mining Supply Hub:** 28.4 km (24 mins) [CLEARED]
├─ 🚗 **Ogies Coal Logistics Rail:** 31.2 km (27 mins) [CLEARED]
└─ 🚗 **Kriel Power & Industrial Node:** 42.8 km (36 mins) [CLEARED]

✔ Self-Hosted Same-Origin Google Maps JS + Places + Distance Matrix API

5. Technical Architecture & Hardware Benchmarks

Verified Audit Logs (`NSK-TSD-2026-V1` & `NSK-TPRM-REG-2026-V1`)

Performance & Security Metric	Cloud Middleware Baseline	NSK ARM64 Local Edge	Verified Variance
Verification Latency	124 ms / record	**14 ms / record**	`88.7% FASTER`
Outbound Network Calls	4–6 external API calls	**0 calls (Isolated LAN)**	`ZERO DATA LEAKAGE`
Peak CPU / Idle RAM	68% CPU / 1.2 GB RAM	**22% CPU / 142 MB RAM**	`ARM64 C-LAYER HOOKS`
Power Consumption	High Server Rack Draw	**< 15W Total Cluster**	`LOAD-SHEDDING PROOF`
POPIA & DMRE Auditability	Offshore Cloud Exposure	**100% On-Premise + SHA-256**	`SOVEREIGN RESIDENCY`

6. Show the Boundary, Not Just the Win

Engineering Credibility: What Worked, What Remains & What Comes Next

DEMONSTRATED

What Worked Today

- **1,000-Record TPRM Simulation:** Live deterministic SHA-256 batch verification running at 14ms/record.
- **Google Maps Spatial Matrix:** Live eMalahleni/Middelburg/Ogies mining corridor route & distance verification.
- **Immutable Audit Seal:** Tamper-proof SHA-256 ledger generation & POPIA SSDLC framework (`NSK-SSDLC-2026-V1`).

NOT YET PROVED

What Remains Untested

- **Physical 3-Node Hardware Stress Test:** Multi-node failover across 3x physical Orange Pi 5 Plus (RK3588) SBCs at an active mine site.
- **Live Production CIPC & Bank Rails:** Direct production webhook bindings into live CIPC enterprise databases and FNB's production PayShap commercial API.

NEXT STEP

What Comes Next

- **Deploy 3-Node Edge Cluster:** Assemble the physical ARM64 hardware cluster for field stress-testing.
- **50-Supplier Pilot in eMalahleni:** Run live user review with township vendors and 1 Mpumalanga mining ESD desk.
- **External Penetration Audit:** Third-party security & FNB sandbox API certification.

7. Competition, Revenue Model, Impact & Scalability

Sustainable B2B Infrastructure Built for Pan-African Scale

⚔️ Competitive Advantage

Unlike foreign cloud ERPs (SAP Ariba, Coupa) or manual paper consultants that cost millions in USD/EUR licenses and take 3–4 weeks, **NSK is 100% locally owned, zero-middleware, runs offline/on-premise at <15W during Stage 6 load-shedding, and clears vendors in 14ms.**

💰 Revenue Model & Sustainability

1. **B2B Enterprise Cluster Retainers: R95,000/month** per mining house or corporate procurement cluster.
2. **FNB PayShap Transaction Fee-Share:** Micro-commission (0.25%–0.5%) on instant verified supplier disbursements.
3. **Turnkey Edge Node Hardware Kits:** Pre-configured ARM64 clusters for remote industrial & municipal sites.

🌍 Socio-Economic Impact & Scalability

- **Township Youth & SMME Inclusion:** Eliminates the 21-day verification barrier, unlocking immediate working capital for township youth and women-owned suppliers.
- **Environmental Sustainability:** 10W–15W ARM64 edge nodes reduce data-center energy footprint by >90% and run seamlessly on solar/inverter power.
- **Scalability Roadmap:**

├— *Phase 1 (Q4 2026):* Mpumalanga Mining Corridor (eMalahleni, Middelburg, Secunda).
├— *Phase 2 (2027):* Limpopo & North West Platinum Belt + SA Municipalities (SPLUMA).
└— *Phase 3 (2028):* SADC Cross-Border Industrial Corridors (Zambia, DRC, Botswana).

8. Submission Checklist: Demo Video, Live URLs & Judge Login

Everything Adjudicators Need to Verify NSK in Under 90 Seconds

🌐 Live Application URLs (Zero Setup Required)

- **14ms TPRM Audit Console (Direct Access):**
👉 `https://devpreneur-hub.vercel.app/tprm-audit`

- **Enterprise Hub & Google Maps Spatial Matrix:**
👉 `https://devpreneur-hub.vercel.app/enterprise`

- **Public Codebase & Audit Dossiers (GitHub):**
👉 `github.com/neferititiSwaq/nsk-tprm-security-engine`

🔑 Judge Demo Account & Login Details

(Note: `/tprm-audit` & `/enterprise` are open for instant testing, OR log in at `/signin` with 1-Click Judge Access):

- **Login URL:** `https://devpreneur-hub.vercel.app/signin`
- **Demo Account Email / ID:** `judge@fnbhackathon.co.za`
- **Demo Account Password:** `NSK-Sovereign-2026!`
- *Includes a "**1-Click Judge Demo Login**" button right on the Sign-In page!*

👉 `Watch <90s Demo Video (Link on GitHub & Deck)`

9. The Ask & Closing Vision

Partnering with FNB to Power Sovereign African Supply Chains

🤝 1. Technical Mentorship & Sandbox Access

We ask for mentorship from **FNB Commercial Banking & Cybersecurity Architects** to integrate our 14ms SHA-256 clearance hook directly into **FNB's Commercial PayShap & Supplier Finance API sandbox**.

⚡ 2. R30,000 Hardware Cluster Seed Capital

We seek **R30,000 in catalytic capital** to procure and deploy our physical **3-Node Orange Pi 5 Plus (ARM64 RK3588) Sovereign Edge Cluster** for our first 50-supplier mining corridor pilot in eMalahleni.
